COIN SIGNAL X PRO
Quick-Start Cheat Sheet

Verdict first. Risk second. Watchlist always.

Educational signals only · Not financial advice

⚡ THE 60-SECOND FLOW

STEP 1 — Paste + Chain

Paste the **token or pair address**
 Select the correct chain (Base · Solana · ETH · etc.)
 Tap **Scan**

STEP 2 — Read the VERDICT (Most Important)

ENTER
→ Behavior looks supportive
→ Still size small and protect capital

WAIT
→ Mixed or unclear signals
→ Patience saves money

AVOID
→ Trap risk, rug pressure, or hype detected
→ Walk away, don't chase

If Verdict feels uncomfortable — trust it.

STEP 3 — Check RISK (Never Skip This)

Look at **Trap · Rug · Hype**

- **Trap Risk High** → Slippage danger → WAIT / AVOID
- **Rug Pressure High** → Exit-liquidity risk → AVOID

- **Hype > Signal** → Crowd chasing → WAIT

Rule:
If Risk is high, the Verdict doesn't matter — **walk away**.

STEP 4 — Use WATCHLIST (Your Edge)

Add tokens you're interested in to Watchlist.
Re-scan what you track instead of chasing trends.

Smart traders re-scan.
Emotional traders chase.

STEP 5 — Smart Exit Reminder

Never go "all in / all out."

- Scale out in steps
- Protect gains
- Let the market prove itself

🧠 QUICK RULES

- If you feel FOMO → you're late → **WAIT**
- Thin liquidity destroys entries → **WAIT / AVOID**
- Viral posts usually come **after** the move
- Calm structure beats hype every time
